The 2023 Water and Sewer Rate Chart is created to give our customers an idea of what they may expect for a quarterly water and/or sewer bill. It is our experience that an average home uses 600 cubic feet of water (roughly 4,500 gallons) per person per quarter. These increments are highlighted in yellow to help you locate your expected usage.

Do you feel your usage is high? Here are a few places to look.

- A common issue we see with high usage is a leaking toilet valve. On average a leaking toilet will consume .25 gallons per minute 24/7 this adds up to 32,000 gallons per quarter (4,331 Cubic feet). This can go unnoticed as they are hard to see or hear.
- Stuck open flapper in toilet tanks, usually is noticed as it causes the toilet to constantly try to fill.
- Check for dripping faucets, garden hoses and hose bibs for leaks.
- Broken pipes will often go unnoticed if they are in a basement/crawlspace.
- Vacant homes with any of the issues above, it is a good idea to turn the water off if you plan to be away for a period of time or have someone check on your place while you are away.

Below is an example of your water meter, with the lid open, you can see total GPM (Gallons Per Minute) usage. You can toggle back and forth to show total usage by covering and uncovering the toggle eye with your finger or lid.

Most likely your home has a water meter like the one in the photo that enables us to perform what we call a DATA Profile. The property owner can contact us to schedule this service. What this consists of is our technician gaining access to the water meter and connecting our equipment to the transmitter. This allows us to extract usage data. This can be shown in an hour-by-hour report.
